

*“Ping Identity came through for us with PingFederate. We have no doubt Ping Identity will keep us stocked with the latest technologies as the Web SSO market evolves.”*

Nick Rapattoni  
Vice President, Rapattoni Corporation

## Challenge

Given the highly decentralized nature of their industry, real estate associations and Realtors® manage a significant number of unique logins in order to collaborate across business IT boundaries. To reduce this burden for 300,000 agents it serves, Rapattoni sought a way to deliver secure SSO access to its multiple business systems.

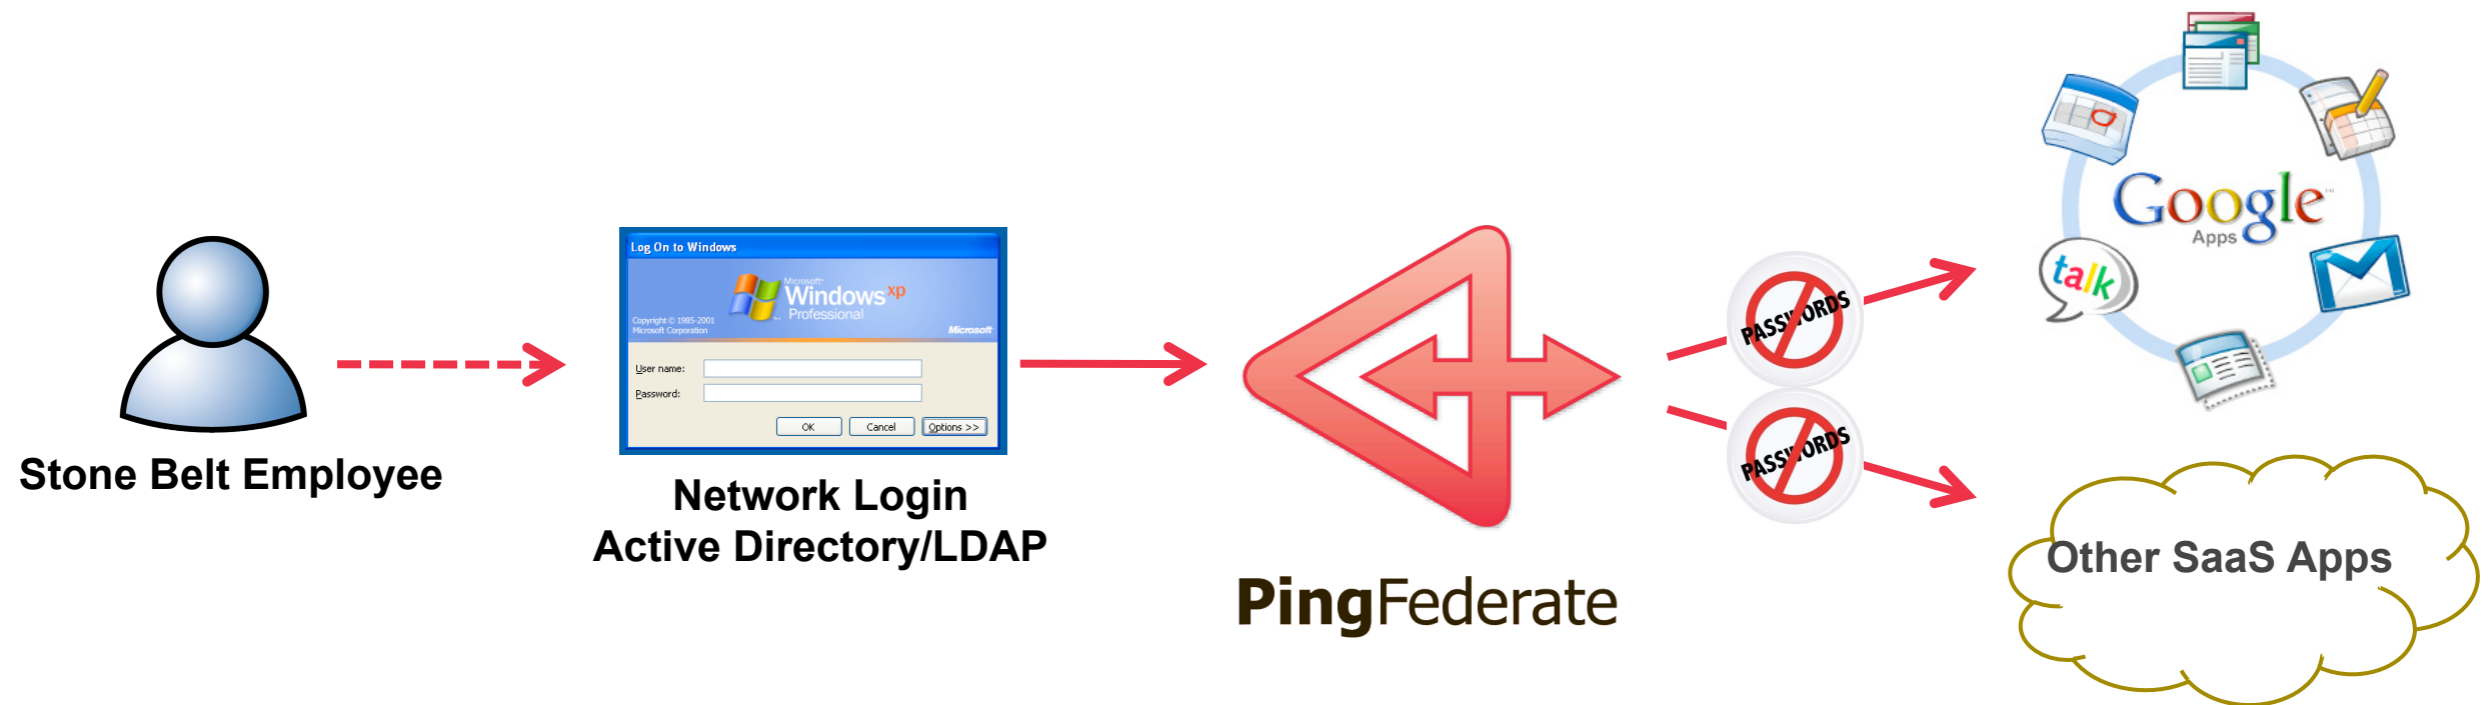

## Solution – PingFederate

- A standards-based solution that integrates with pre-existing Internet SSO technologies in MLS systems countrywide
- Built into the Rapattoni Single Sign-On offering for client access to trusted sites through a single login at the MLS or association site
- Quick/Easy to implement

## Results

- Improved user experience through seamless Single Sign-On
- Allows for additional secure collaboration opportunities
- Reduced complexity, excellent time to market and low-cost integration overhead for Rapattoni and its clients

**About Rapattoni Corporate:** Rapattoni Corporation has been serving the real estate industry for 38 years. The company provides an array of integrated products and services for real estate associations and MLS organizations, including Internet MLS systems, association management software (AMS), and Secure Logon with Single Sign-On identity portals for online security and convenience. The company's MLS products are serving about 300,000 agents nationally and its association management customers represent more than 88% of the nation's Realtors®. PingFederate® eliminates the extra passwords and administrative work that come with Gmail and other SaaS applications. Once the Stone Belt administrator sets up a user in the organization's directory, PingFederate automatically sets up the user in Gmail. The user then logs in to the Stone Belt network and has secure click-and-work access to Gmail and other SaaS applications with no additional passwords required.
