

# Ping Identity + Accenture Partnership

## DATASHEET

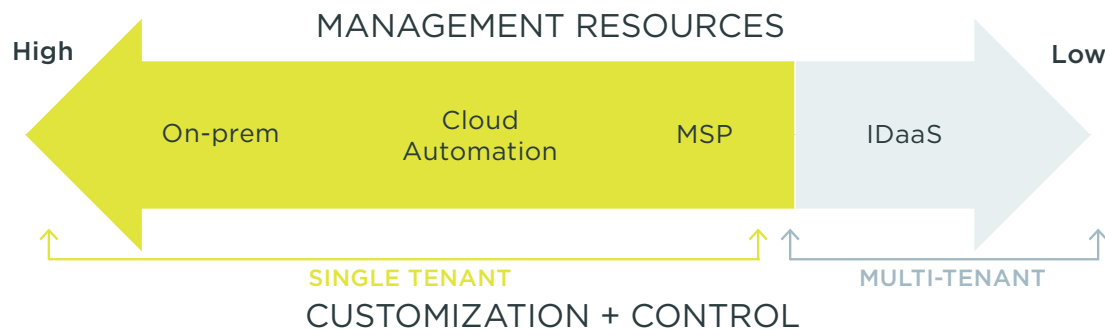

Ping Identity has partnered with Accenture to present a managed services offering that enables organizations to quickly move their business applications and infrastructure to the cloud without taxing internal management resources, while also enhancing security and permission control through advanced identity and access management (IAM) services. The Ping Identity and Accenture partnership allows enterprises to:

- Rapidly deploy the Ping Identity Platform.
- Leverage Accenture's identity experts.
- Utilize single-tenant cloud hosting.

Combining the Ping Identity Platform with Accenture's managed services offers more control and customization than an identity-as-a-service (IDaaS) solution while using fewer management resources than on-premises or cloud-automated deployments.

### Features:

- Single-tenant
- AWS cloud based
- More customization & control than IDaaS
- Valuable access to Accenture's identity experts
- Based on the Ping Identity Platform
- Global deployment options

## CAPABILITIES & BENEFITS

### Customization & Control

- Dynamic configuration parameters enabled
- Single-tenant
- Multiple-hosting options

### Automation

- Dynamic configurations are automatically deployed
- Infrastructure and applications monitored with auto-scaling of resources
- Automatic testing for every automatically deployed use case

### Accenture Managed Services

- Digital Identity team delivers end-to-end IAM services
- Practical experience working globally & across industries
- Cross collaboration between industry specialists and digital identity specialists

### Ping Identity Platform

- Feature-rich, standards-based, enterprise-grade IAM platform
- PingFederate, PingAccess, PingDirectory, PingDataGovernance, PingOne, PingID
- A better user experience without sacrificing security
