

Ping + Identropy

A Comprehensive Approach to Identity
and Security

ACHIEVE COMPLIANCE, SECURITY, COST CONTAINMENT AND OPERATIONAL RELIABILITY

At its heart, identity and access management (IAM) is a business process issue, not a technology problem. Following a “process first, technology second” approach helps enterprises zero in on core business requirements, allowing you to select and implement the appropriate technologies to address those needs. For IAM, those technologies require a flexible, high-performance solution that provides single sign-on (SSO), multi-factor authentication (MFA) and access security across all of your digital properties; unifies and secures identity-centric customer data (directory); and manages customer consent to meet privacy regulations (data governance). It also requires a partner with deep experience mitigating security threats and ensuring compliance, increasing enterprise agility and flexibility, and modernizing legacy IAM solutions to increase user productivity.

The combination of Ping Identity + Identyropy provides a path forward for clear alignment of technology capabilities with your strategic vision, helping your organization build and maintain successful workforce and customer identity management programs so that you can securely connect to cloud, mobile, SaaS and on-premises applications and APIs. It gives you an effortless avenue for any user to access the systems and data they need, while allowing you to leverage identity intelligence and adaptive authentication to prevent security breaches, manage sensitive data and improve user engagement by optimizing both security and convenience.

HOW PING AND IDENTROPY WORK TOGETHER

Identyropy provides customers with a holistic view of their IAM programs, using a strong consultative approach that takes customers’ unique requirements and constraints into account and shapes the delivery approach to maximize ROI. Ping Identity helps enterprises going through digital transformations enhance their security posture by improving their authentication, authorization and API capabilities.

When paired, Identyropy and Ping offer a comprehensive identity solution that increases workforce productivity and the customer experience with a frictionless transition from legacy systems. Identyropy + Ping offers clients the ability to reduce security risk and ensure compliance with Ping’s world-class identity solutions and Identyropy’s ‘Plan, Build, Run’ methodology, a three-phased approach that helps customers achieve compliance, security, cost containment and operational reliability:

Advisory Services (Plan)

Strategic Planning, Roadmap Development & Process Improvement

Implementation Services (Build)
Agile-based Deployment Methodology

Managed Services (Run)

Post-Deployment Monitoring & Operational Support

WHAT ARE THE BENEFITS?

Identropy understands how identity plays a critical role in an organization's security program, and Ping Identity's intelligent identity products are essential to a mature security program.

Combined, they enable you to gain:

- Workforce and customer identity and access management solutions that leverage in-depth product knowledge, a culture of innovation and decades of accumulated expertise.
- A high level of knowledge and skill that keeps you up to date on the latest versions of identity management technology in the marketplace.
- Simplified authentication and authorization policies to help you mitigate security threats and ensure compliance while increasing convenience.
- The ability to accelerate cloud adoption with an IAM solution that simplifies the migration of resources across cloud, SaaS and on-premises environments, including the ability to manage IAM how and where you want, making adjustments as needed.

SUCCESS STORY

A large pharmaceutical company chose IdentityOne partnered with Ping Identity, using PingFederate, PingOne and PingID to provide robust identity solutions for their global workforce and partner ecosystem—which ensured a smooth transition and frictionless migration while improving workforce and partner productivity.

Use cases include enhanced SSO and MFA capabilities for internal users, legacy application integrations for the company’s manufacturing division, and federated access capabilities to support streamlined clinical trials. Additionally, the company engaged in a professional services engagement in which IdentityOne and Ping co-deliver an architecture/design/implementation engagement.

Ping Identity

Ping Identity is pioneering Intelligent Identity. We help enterprises achieve Zero Trust identity-defined security and more personalized, streamlined user experiences.

IdentityOne

IdentityOne’s proven ‘Plan, Build, Run’ approach has helped customers build and maintain successful identity and access management programs for over 10 years. IdentityOne has pioneered the development of a model that balances business needs, security best practices and operational requirements.

For more information about how Ping Identity and IdentityOne joint solutions can help your business, contact [Ping](#) or [IdentityOne](#).

Ping Identity envisions a digital world powered by intelligent identity. We help enterprises achieve Zero Trust identity-defined security and more personalized, streamlined user experiences. The Ping Intelligent Identity Platform provides customers, employees and partners with access to cloud, mobile, SaaS and on-premises applications and APIs, while also managing identity and profile data at scale. Over half of the Fortune 100 choose us for our identity expertise, open standards leadership, and partnership with companies including Microsoft, Amazon and Google. We provide flexible options to extend hybrid IT environments and accelerate digital business initiatives with multi-factor authentication, single sign-on, access management, intelligent API security, directory and data governance capabilities.
