UNCOVER UNSANCTIONED CLOUD APPLICATIONS AND ENABLE SECURE ACCESS
Enterprises are adopting cloud applications in a big way, and for good reason—cloud apps help employees get their jobs done more quickly, easily and flexibly than traditional software. However, there are hurdles to adoption. If you can’t manage employee access or enforce usage policies, cloud apps are difficult to embrace.

**But, what if you could...**

- Bring all of those cloud apps under one umbrella?
- Manage their access with an industry-leading identity management and single sign-on solution?
- Discover and run deep analytics on new apps, and enforce granular cloud app usage policies?

With these visibility and control capabilities, you could fully adopt cloud applications and ensure security and compliance for those apps.

---

**INTRODUCING THE PING IDENTITY-Netskope SOLUTION**

Ping Identity® and Netskope™ have partnered to bring you an integrated solution that allows you to accomplish these capabilities without impacting user experience. This solution consists of single sign-on (SSO) from Ping Identity and Netskope, a safe cloud enablement platform that provides deep analytics and policy enforcement across cloud apps.

**With this solution, you can:**

- Manage your cloud apps in a closed-loop manner.
- Bring all of your cloud apps into your identity management fold.
- Ensure consistent cloud app security and compliance.
- Enable mobile-to-cloud access.
- Gain comprehensive, end-to-end reporting of cloud app access and usage with reporting and dashboards.
HOW THE INTEGRATION WORKS

During the Ping Identity sign-on process, download the Netskope client or mobile profile. Once Netskope is installed, you may find new cloud apps and bring them into the identity management fold for complete security, compliance and a better user experience.

Netskope

Netskope is the leader in safe cloud enablement, giving IT the ability to find, understand and secure cloud apps. Netskope empowers organizations to direct usage, protect sensitive data and ensure compliance in real time, on any device, for any cloud app, so the business can move fast with confidence.
